Introducing Allsport IMC Wrist Sport™, a unique brace designed to be the most versatile, functional wrist brace on the market. With a blend of custom-fit technology and off-the-shelf convenience, the IMC Sport™ can be used for functional support, rehab support or both.

The IMC Sport™ is engineered to limit the extension of the wrist with 60° of extension stop built into the frame. Three additional extension stops are included (0°, 20°, 40°) to accommodate for the various range-of-motion of the wrist from person to person. This is accomplished with a patent-pending, bi-axial, articulating hinge system that also allows for side to side movement of the wrist.

The open-palm design is comfortable and limits the obstruction of the grip, while the rigid brace frame provides stability and added support. The frame is constructed of an injection molded, high-strength composite material. The IMC Sport™ is available in three sizes (Small, Medium, Large). Sizing is determined by the width measurement of the wrist. (See sizing chart below)

**FEATURES**

- Single strap system makes application easy, quick and comfortable
- Frame is constructed of an injection molded, high-strength composite material
- Liner is constructed from a high-grade, open cell foam and is ergonomically shaped for fit and comfort
- Bi-axial, articulating hinge provides a controlled and anatomically-accurate movement of the wrist
- Unique, open palm design is minimally invasive and limits obstruction of user's grip
- Non-corrosive materials, ideal for water sports

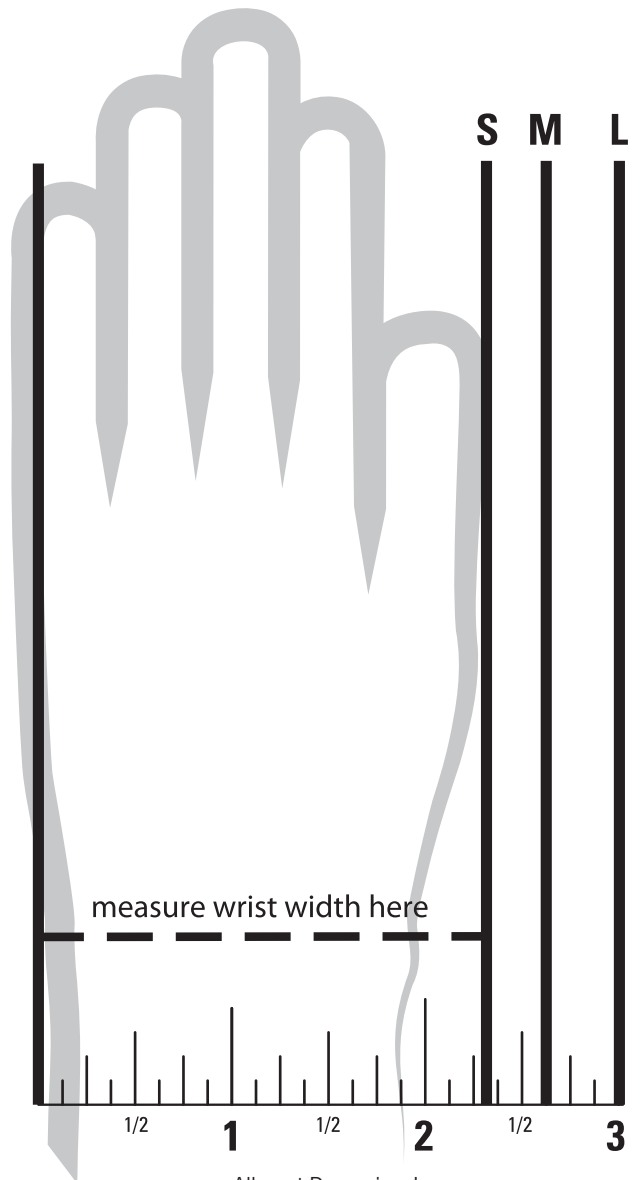

**Allsport IMC Sport™ brace has 0-60° Variable Extension Control**

The Allsport IMC Sport™ brace has 60° of extension stop built into the frame. 3 additional extension stops are included, in case a different setting is desired.

**Single Strap System**
